Biometrics is, literally, “measurements of life”. They consist of *“automated methods of identifying or verifying the identity of a person based on one, or more, physiological or behavioral characteristic(s).”*

Biometric Voice Verification Technologies

FOR IMMEDIATE RELEASE

Leading Canadian Telecom increases original order of VoiceVantage™ software for Correction Facility Inmate Call Verification tenfold

Boston, Massachusetts. (June 12, 2015) Frances M. Lynch, CEO of THC Technologies Corporation, a private corporation engaged in the global biometric solutions market, today announced, "Beginning with our initial sale in 2004 of 70,000 licenses to a North American market leader our highly secure voice verification products continue to be the correctional facilities manager's choice worldwide. Our most recent significant reorder by a major Canadian telecom for its inmate corrections program further enhances our leadership role.

The market for correctional telecommunications exceeds \$3.5 billion per year in the Americas alone and THC continues to enjoy recognition as the industry's inmate voice verification leader. Demand for our highly secure voice verification software continues to increase exponentially."

Tom T. Wilkerson, Vice President of Marketing agreed, "Our extensive industry experience and the impressive VoiceVantage™ technology portfolio combined with our Canadian Telecom Client Partner's proven innovative products and services offerings further insure each companies' respective leadership positions in the inmate communications market."
