Biometrics is, literally, “measurements of life”. They consist of *“automated methods of identifying or verifying the identity of a person based on one, or more, physiological or behavioral characteristic(s).”*

VoiceVantage

Biometric Voice Verification Technologies

FOR IMMEDIATE RELEASE

One of the World’s Top Four International Financial Services Institutions Chooses VoiceVantage™

Boston, Massachusetts. March 30, 2017) THC Technologies Corp a private corporation engaged in the global biometric solutions market, today won one of the world’s top four financial services provider’s bid for services. Further validation of its VoiceVantage™ voice verification software’s premier status within the international financial services market.

THC CEO Frances Lynch said, “This is a very important and strategic win for us. THC provides the core proprietary voice verification solutions our Partners deploy to secure software applications, often at military grade, for multiple security markets including the international financial services sector. THC and its Partners market voice activated solutions that advance client’s cyber security capabilities, increase client satisfaction and enhance organizational resilience.”

Tomas T. Wilkerson, THC’s VP of Marketing concurred saying, "Organizations worldwide in financial services, corrections, healthcare, government and many other industries maximize performance and provide investment protection because THC and our partners provide them complete best-of-breed voice authentication solutions. We focus on designing, developing and deploying voice solutions with our partners sharing the common goal to create best-of-breed hardware and software configurations on which to deploy their industry specific solutions.”
